

## **WHAT DO THE DOCTORS SAY ABOUT VACCINES?**

**“The only safe vaccine is one that is never used.” – Dr. James A. Shannon, MD, former director of the National Institutes of Health (1955-1968)**

“There is a great deal of evidence to prove that immunization of children does more harm than good.” – Dr. J. Anthony Morris, formerly Chief Vaccine Control Officer at the FDA

“My own personal view is that vaccines are unsafe and worthless. I will not allow myself to be vaccinated again....Vaccines may be profitable but in my view, they are neither safe nor effective.” – Dr. Vernon Coleman, MB, ChB, DSc (Hon)

“Vaccines are highly dangerous, have never been adequately studied or proven to be effective, and have a poor risk/reward ratio....The treatment of cancer and degenerative diseases is a national scandal. The sooner you learn this, the better off you will be.” – Dr. Allen Greenberg, MD

“I found the whole vaccine business was indeed a gigantic hoax. Most doctors are convinced that they are useful, but if you look at the proper statistics and study the instances of these diseases you will realize that this is not so.” – Dr. Archivides Kalokerinos, MD

“The vaccinations are not working and they are dangerous. We should be working with nature.” – Dr. Lendon Smith, MD

“In my medical career I’ve treated vaccinated and unvaccinated children and the unvaccinated children are far healthier than the vaccinated ones.” – Dr. Philip Incao, MD

“There is no scientific evidence that vaccinations are of any benefit, but it is clear that they cause a great deal of harm.” – Dr. Gerhard Buchwald, MD

“Nobody needs to be confused but everybody better be darn well frightened about taking any vaccine, under any circumstance, for any reason, at any time in their life.” – Dr. Daniel H. Duffy Sr., DC (retired air force officer – 21 yrs., family doctor – 28 yrs., vaccination researcher – 49 yrs.)

“I have no faith in vaccination; nay, I look upon it with the greatest possible disgust, and firmly believe that it is often the medium of conveying many filthy and loathsome diseases from one child to another, and no protection whatever against small pox. Indeed, I consider we are now living in the Jennerian epoch for the slaughter of innocents, and the unthinking portion of the adult population.” – Dr. W.J. Collins, MD, BS, BSc, MRCS

“I vaccinated both my children with the MMR jab, but this was before I started my research into the

problems associated with it. Knowing what I know now, I would not vaccinate my children and run the risk of them getting diabetes, asthma, eczema, becoming more susceptible to meningitis and ending up chronically disabled.” – Dr. Jayne Donegan, GP, Homeopath

“I once believed in Jenner; I once believed in Pasteur. I believed in vaccination. I believed in vivisection. But I changed my views as the result of hard thinking.” – Dr. Walter Hadwen, MD, LSA, MRCS, LRCP, MB, BS, BSc

“There is no evidence that any influenza vaccine thus far developed is effective in preventing or mitigating any attack of influenza. The producers of these vaccines know that they are worthless, but they go on selling them anyway.” – Dr. J. Anthony Morris, formerly Chief Vaccine Control Officer at the FDA

“There is insufficient evidence to support routine vaccination of healthy persons of any age.” – Dr. Paul Frame, MD, Journal of Family Practice

“Only after realizing that routine immunizations were dangerous did I achieve a substantial drop in infant death rates.” – Dr. Archivides Kalokerinos, MD

“To create fear among parents to strengthen their motivation to vaccinate is an important part of the publicity used to promote vaccinations. A whole branch of research is examining the question: What level of fear needs to be created to appear as convincing as possible?” – Dr. Gerhard Buchwald, MD

“I’ll talk about vaccines. Number one, vaccines make people sick. They don’t work. They don’t protect. The use of vaccines is totally wrong! It’s perfect nonsense based on fear. They are dangerous. One child out of five has overwhelming disabilities from vaccines – neurological problems, seizures. I’ve got a whole list. There are plenty of books on this subject. Doctors don’t even read about this.”  
Interview with Guylaine Lanctot, MD

“During those 30 years I have run against so many histories of little children who had never seen a sick day until they were vaccinated and who, in the several years that have followed, have never seen a well day since. I couldn’t put my finger on the disease they have. They just weren’t strong. Their resistance was gone. They were perfectly well before they were vaccinated. They have never been well since.” – Dr. William Howard Hay, MD

“Had my mother and father known that the poliovirus vaccines of the 1950s were heavily contaminated with more than 26 monkey viruses, including the cancer virus SV40, I can say with certainty that they would not have allowed their children and themselves to take those vaccines. Both of my parents might not have developed cancers suspected of being vaccine-related, and might even be alive today.” – Dr. Howard B. Urnovitz, PhD, CEO, CSO and co-founder of Chronix Biomedical

“We are taught by the authorities that vaccines protect us against eventual aggressive viruses and microbes, and, therefore, prevent contagious illnesses and epidemics. This lie has been perpetuated for 150 years despite the ineffectiveness of vaccines in protecting against illnesses.” – Dr. Guylaine Lanctot, MD

The greatest threat of childhood diseases lies in the dangerous and ineffectual efforts made to prevent them through mass immunization....There is no convincing scientific evidence that mass inoculations can be credited with eliminating any childhood disease.” – Dr. Robert Mendelsohn, MD, Author

“Childhood vaccines are giving us a world of chronic illness: autism, developmental disorders, Asperger’s Syndrome, brain tumors, leukemia, cancers, information processing disorders, impulsive violence, allergies, asthma, diabetes, Crohn’s disease, intestinal disorders, are just some of the vaccine associated disorders.” – Dr. Tedd Koren, DC

“I am no longer trying to dig up evidence to prove vaccines cause autism. There is already abundant evidence. This debate is not scientific but is political.” Dr. David Ayoub, MD

“There are at least seven laboratory studies, clinical studies, of blood, cerebral, spinal fluid, biopsies of autistic children which show huge differences between autistic children and normal children in terms of the presence of things like measles vaccine virus in their intestinal tract, for example, or their neurons. So, there’s one line of evidence. Another, of course, is that we have data from thousands of parents who testify, often with videotapes and photographs and eyewitness reports, that their kid was perfectly normal. And they can demonstrate it, as I say, very conclusively with tapes, until after the vaccine. The kid retreated into autism. There’s just converging evidence from many, many directions.” – Dr. Bernard Rimland, PhD, founder and former director of the Autism Research Institute

“When the link between the use of unsafe, mercury-laden vaccine and autism, ADHD, asthma, allergies and diabetes becomes undeniable, mainstream medicine will be sporting a huge, self-inflicted and well-deserved black eye. Then will come the billion-dollar awards, by enraged juries, to the children and their families.” – Dr. Bernard Rimland, PhD, founder and former director of the Autism Research Institute

"The greatest threat to our health today is the medical community, and one of their most dangerous tools is vaccination - particularly the horrific procedure of injecting foreign protein into newborn infants!" - Dr. Daniel H. Duffy, DC

"For thirty years kids died from smallpox vaccinations even though no longer threatened by the disease." - Dr. Robert Mendelsohn, MD

"Many here voice a silent view that the Salk and Sabin Polio Vaccines, being made from monkey kidney tissue, have been directly responsible for the major increase in leukaemia in this country." - Dr. F. Klenner, MD

"As a clinician, my current belief which guides my practice with these children is that any child given the Hep B vaccination at birth and subsequent boosters along with DPT has received unacceptable levels of neurotoxin in the form of the ethyl mercury in the thimerosal preservative used in the vaccine. In any child with a genetic immune susceptibility (probably about one in six) this sets off a series of events that injure the brain-gut-immune system. By the time they are ready to receive the MMR vaccination, their immune system is so impaired in a great number of these children that the triple vaccine cannot be handled by the now dysfunctional immune system and they begin their obvious descent into the autistic spectrum disorder." - Jaquelyn McCandless, MD

"In 1976 I was working in the Gulf Country around Cape York, in an aboriginal community of about 300 people. The Health Department sent around a team and vaccinated about 100 of them against flu. Six were dead within 24 hours or so and they weren't all old people, one man being in his early twenties. They threw the bodies in trucks to take to the coast where autopsies were done. It appeared they had died from heart attacks." - Archie Kalokerinos, MD

"As a retired physician, I can honestly say that unless you are in a serious accident, your best chance of living to a ripe old age is to avoid doctors and hospitals and learn nutrition, herbal medicine and other forms of natural medicine unless you are fortunate enough to have a naturopathic physician available. Almost all drugs are toxic and are designed only to treat symptoms and not to cure anyone." - Dr. Alan Greenberg, MD

"According to the records of the Metropolitan Life Insurance Company, from 1911 to 1935 the four leading causes of childhood deaths from infectious diseases in the U.S.A. were diphtheria, pertussis, scarlet fever, and measles. However, by 1945 the combined death rates from these causes had declined by 95% before the implementation of mass vaccine programs." - Dr. Buttram, MD

"I would consider the risks associated with measles vaccination unacceptable even if there were

convincing evidence that the vaccine works. There isn't. .... In 1900 there were 13.3 measles deaths per 100,000 population. By 1955, before the first measles shot, the death rate had declined 97.7 percent to only 0.03 deaths per 100,000." – Dr. Mendelsohn, MD

"Up to 90% of the total decline in the death rate of children between 1860 and 1965, because of whooping cough, scarlet fever, diphtheria, and measles, occurred before the introduction of immunizations and antibiotics." - Dr Archie Kalokerinos, MD

"What the vaccinators don't tell you is that communicable diseases have been declining at a steady rate for 150 years and that there is no relationship between the various diseases and the onset of immunization. Without exception, the vaccine program for each of the childhood diseases was inaugurated after that particular disease had begun to disappear. Contrary to what you have been told, this includes polio. What the vaccines have done is cause the various childhood diseases to become adulthood diseases - with far more serious implications, mumps in men and rubella in women for example." - Dr. William Douglass, MD

"One of the medical profession's greatest boasts is that it eradicated smallpox through the use of the smallpox vaccine. I myself believed this claim for many years. But it simply isn't true. One of the worst smallpox epidemics of all time took place in England between 1870 and 1872 – nearly two decades after compulsory vaccination was introduced. After this evidence that smallpox vaccination didn't work the people of Leicester in the English midlands refused to have the vaccine any more. When the next smallpox epidemic struck in the early 1890s the people of Leicester relied upon good sanitation and a system of quarantine. There was only one death from smallpox in Leicester during that epidemic. In contrast the citizens of other towns (who had been vaccinated) died in vast numbers. ....Doctors and drug companies may not like it but the truth is that surveillance, quarantine and better living conditions got rid of smallpox – not the smallpox vaccine.....It is worth pointing out that Edward Jenner, widely feted as the inventor of the smallpox vaccine, tried out the first smallpox vaccination on his own 10 month old son. His son remained mentally retarded until his death at the age of 21. Jenner refused to have his second child vaccinated." – Dr. Vernon Coleman, MB

"I have lectured all over the world... I have always had a special interest in newspapers. All of them have one thing in common, there is always some reference made to some epidemic in some part of the world. For instance, two years ago, one paper referred to a polio epidemic in Holland. For the past three years, our newspapers have commented on the diphtheria epidemic in Russia. By these means, the population is constantly threatened with epidemics, they have been made to fear them, and the reports always conclude: "Go and get vaccinated." - Dr. Buchwald, MD

"In 1866, an English physician described a very strange illness. Children looked like Mongols. His name was Down. That's why we call it Down's Syndrome today... I should add that this syndrome is a result of the vaccinations carried throughout England by Jenner in 1796... It (Down's Syndrome) is probably the first congenital disease caused by vaccinations. In Germany, the first child with evidence of Down's Syndrome was reported in 1922. Today, one in every 700 newborns has it." - Dr. Buchwald, MD

"Using kids as guinea pigs in potentially harmful vaccine experiments is every parents' worst nightmare. This actually happened in 1989-1991 when Kaiser Permanente of Southern California and the Centers for Disease Control (CDC) jointly conducted a measles vaccine experiment. Without proper parental disclosure, the Yugoslavian-made "high titre" Edmonston-Zagreb measles vaccine was tested on 1,500 poor, primarily black and Latino, inner city children in Los Angeles. Highly recommended by the World Health Organization (WHO), the high-potency experimental vaccine was previously injected into infants in Mexico, Haiti, and Africa. It was discontinued in these countries when it was discovered that the children were dying in large numbers." - Dr. Alan Cantwell MD

"Vaccination against tuberculosis is often given as the reason why this disease stopped being quite the threat to life that it had been in the 18th century. But again, this isn't true. Robert Koch discovered the pathogen that causes TB back in 1883. After that BCG vaccination was introduced and then, subsequently, mass treatment programs were devised with chemotherapy. None of these discoveries or introductions had any effect on the incidence of tuberculosis. Contracting TB doesn't provide any immunity against a second infection. And if a natural infection doesn't provide protection then a vaccination certainly won't provide protection. How on earth can it? It was noticed decades ago that in the lung sanatoriums that specialized in the treatment of TB patients there was no difference in the survival rates of patients who had been 'protected' against TB with BCG vaccination when compared to the survival rates of patients who had received no such 'protection'. The tuberculosis vaccination (the Bacillus Calmette-Guerin – known as BCG) consists of a weakened, living bovine mycobacterium. The vaccine was used for many years but a WHO trial in India showed that the vaccine offers no protection against the disease. Indeed, when new cases of tuberculosis increased annually in the areas where people had been vaccinated against the disease the trial seemed to suggest that there might be a link between the vaccine and outbreaks of the disease." - Dr. Vernon Coleman, MB

"Vaccination against diphtheria was introduced to Germany in 1925. After the introduction of the vaccine the number of cases of diphtheria steadily increased until, shortly after the Second World War, production of the vaccine was halted. There was a decline in the incidence of the disease which coincided with the fact that the vaccination was no longer being used. When the vaccine was subsequently reintroduced the decline in the incidence of the disease slowed down. As with whooping cough, tetanus and other diseases, the incidence and number of deaths from diphtheria, were in decline

long before the vaccine was introduced." - Dr. Vernon Coleman, MB

"The whooping cough vaccine has never had much of an influence on the number of children dying from whooping cough. The dramatic fall in the number of deaths caused by the disease came well before the vaccine was widely available and was, historians agree, the result of improved public health measures and, indirectly, the use of antibiotics. .... The introduction of the vaccine really didn't make very much, if any, difference to the fall in the incidence of the disease. Even today (1988) thirty years after the introduction of the vaccine, whooping cough cases are still running at about 1,000 a week in Britain. Similarly, the figures show that the introduction of the vaccine had no effect on the number of children dying from whooping cough. .... My second point is that the whooping cough vaccine is neither very efficient nor is it safe..... the government (in the form of the DHSS) has consistently lied about the whooping cough vaccine, has distorted the truth and has deceived both the medical profession (for the majority of doctors and nurses who give these injections accept the recommendations made by the DHSS without question) and millions of parents. The DHSS may have saved itself a tidy sum in damages. But the cost to the nation's health has been enormous. And this, remember, is merely one more example of the way in which the truth has been distorted by those whom we trust to provide us with honest, accurate advice about medicine and health care." - Dr. Vernon Coleman, MB

"This new mandatory STD vaccine shouldn't hurt a bit."
